

Cascade Forge - 2026 Product Roadmap

Theme 1 - Reliability and Scale

The 2026 reliability theme focuses on the Helix CI scheduler and the PulseDB ingest path. Both have shown latency regressions at peak hours in the largest customer tenants. The target by end of Q3 2026 is to sustain a 99.95% monthly availability SLO across all three core products, measured from the customer edge.

Key initiatives:

- Q1 2026 - Helix CI scheduler v3 rollout (sharded by tenant).
- Q1 2026 - PulseDB write-ahead log compaction rewrite.
- Q2 2026 - Stitch SDK collector multi-tenancy.
- Q3 2026 - Cross-region active-active for control plane (GA target).

Theme 2 - Developer Experience

Helix CI's CLI will be rewritten in Rust during the first half of 2026, replacing the current Node.js implementation. The new CLI ships as a single static binary with sub-100ms cold start. A new VS Code extension is planned for general availability in Q2 2026, with parity for JetBrains IDEs targeted for Q4 2026.

PulseDB will receive a new query playground in the web UI, including saved queries, share links, and exportable charts. Target ship date is 15 May 2026.

Theme 3 - Stitch SDK Expansion

Stitch SDK is the company's youngest product and the focus of significant investment in 2026. Planned milestones:

- February 2026 - Continuous profiling beta (CPU and memory).
- May 2026 - Native PHP and Ruby SDKs.
- July 2026 - Distributed-tracing-aware anomaly detection.
- October 2026 - Frontend RUM (real user monitoring) general availability.

The goal is to make Stitch SDK contribute at least 18% of total ARR by year end 2026, up from 9% at the end of 2025.

Theme 4 - Compliance and Regions

To unlock regulated industries in EMEA, Cascade Forge will pursue ISO 27017 and ISO 27018 certification during 2026, with a target completion date of November 2026. A dedicated EU data residency region will launch on Helix CI by 1 April 2026, hosted in Frankfurt and operated under a German legal entity incorporated in February 2026.

A SOC 2 Type II renewal audit is scheduled for October 2026.

Theme 5 - Pricing and Packaging

The pricing pages for Helix CI and PulseDB will be refreshed in March 2026.

A new "Growth" tier is being added between Team and Business on Helix CI, targeted at organizations of 50 to 200 engineers. PulseDB introduces a usage-based add-on for retention extension beyond 90 days, priced at \$0.000040 per data point per day.

Out of Scope

The following items were considered for 2026 but have been explicitly deferred:

- An on-premises self-managed deployment of Helix CI.
- A managed Postgres offering.
- Mobile SDK support for iOS and Android.

These remain on the longer-term roadmap and will be revisited during the 2027 planning cycle.
